

The Calf Buddy™ Hook System

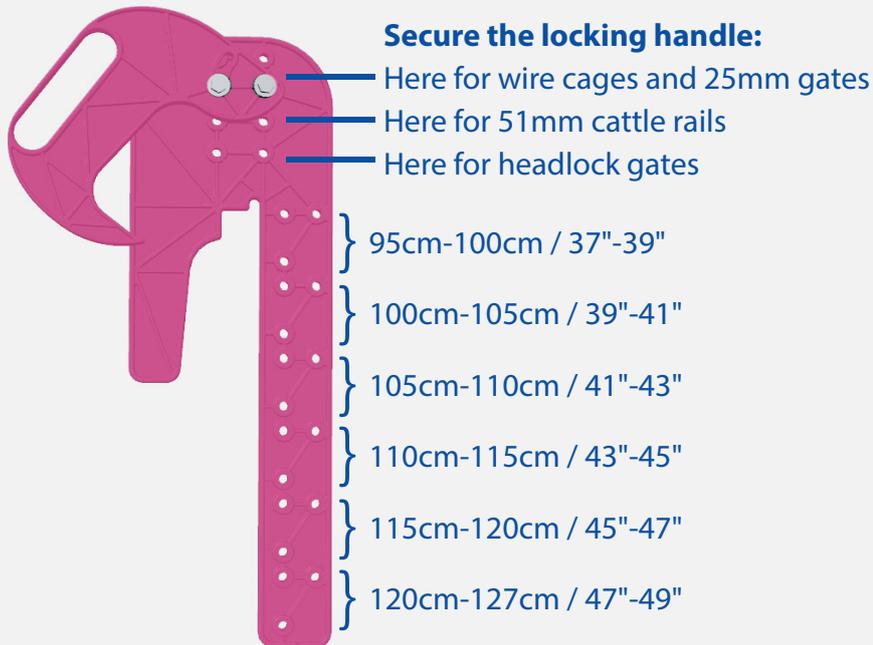

Dairy
Spares

Designed to fit wire cage, 25mm box steel, 50mm pipe rails and headlock gates.

The hook is height adjustable so calves drink at the perfect height no matter what rails you use.

The unique locking 'swivel handle' is comfortable to use and secures the feeders in place.

For the bespoke hook system to work perfectly on farm, just measure and attach!

Get the height right:

Standing on the calf-side of your pen, measure the rail height. Bolt the hook to the feeder using the marked holes.

Teats will now be around 60cm-65cm from the ground - the correct height for calves to feed.

Set the locking handle:

Determine your rail type. Attach the locking handle to the hook according to the rail.

Correct height, and locks perfectly onto your rails!
