PACKAGING AND THE LOAD ON LANDFILL

Approximately 400 million plastic bags are used in New Zealand each year, with most ending up in landfills, waterways, or as litter. A single plastic bag can take up to 1000 years to degrade into the environment.

ISO940 ECO PACKAGING

Betacraft has now replaced the plastic ISO940 ECO packaging with 100% biodegradable (certified) PLA bags, even the button is made of coconut shell! The new option uses water-based ink made of biodegradable pigment suspended in water, a greener alternative to plastisol ink.

QUEST FLEECE ECO PACKAGING

The Quest Fleece ECO collection is now packaged in a water-soluble and non-toxic PVA.

- Water soluble in <180 days
- Compostible in <180 days
- 100% biodegradable

All products are available through Dairy Spares stockists.

ISO940 ECO

In 2021 Betacraft launched the ISO940 ECO collection. Made from GRS* certified fabrics made from recycled plastic bottles, it gives discarded plastic a new life and reduces landfill waste.

The nylon Ripstop outer fabric is made from recycled nylon yarns sourced from fishing nets, clothing, and excess production.

BCF30

QUEST ECO

Each piece in the Quest ECO fleece collection is made from GRS certified waste yarns. This supports Betacraft's mission to reduce textile waste and minimise our impact on the environment.

Made from 100% recycled polyester fleece with a 100% recycled nylon overlay.

*GLOBAL RECYCLING STANDARD

The Global Recycling Standard or GRS is the certification used to guarantee the recycled content of Betacraft's garments.
