

**UNDER PRESSURE TO  
SPOT HEATS?**

**Kamar  
Heatmount Detectors**

**will take the  
pressure for you.**

**No power required.**

**No microchips.**

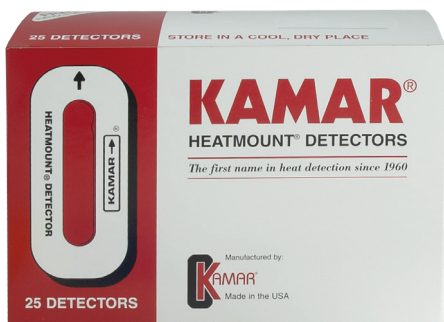

**Just glue.**

**Kamar Heatmount Detectors** take the guesswork out of detecting heat in beef and dairy cattle.

**To use:** glue the Kamar detector over the sacrum of the cow. When she is mounted by another cow for at least 3 seconds, the pressure applied onto the detector turns it from white to a bright red, indicating she is ready to be bred.

Each box contains 25 detectors and one tube of adhesive. Extra tubes of adhesive can be purchased separately.

***Available through Dairy Spares stockists:***

**KA25** – Kamar Heatmount Detectors

**KA26** – Kamar Adhesive
