DB28 Suitable for external
Fullwood rotary

The DB28 bracket positions the bucket to allow it to pass underneath the entry bridge.

DB29 Suitable for internal
Westfalia rotary

The DB29 bracket is spaced to permit unimpeded operation of the control cords.

The complete solution for milk separation on today's modern rotary parlours

When milk from the next cow on the platform needs to be kept separate, the operators requirements of a modern rotary parlour need to be quick, simple and convenient.

The combination of the new bucket support brackets for rotary parlours and Dairy Spares large capacity bucket provides the ideal solution to the problem.

The new rotary brackets are easy to handle, come with a hot dipped galvanise finish and are designed for simple attachment to both platform and the Dairy Spares bucket.

The operator can quickly change buckets between cows allowing milk from individual cows to be conveniently separated and with a large 36 litre capacity the bucket caters for today's high yielding dairy cow.

Both models of bucket come complete with lid retaining strap for security and two lifting handles for ease of handling.

For parlours where the operator is outside the platform the DB28 bracket can be coupled with either the DB52 milking bucket complete with individual pulsator and cluster assembly or the DB18A dump bucket for insertion into the long milk tube.

For internal rotaries where the operator works within the platform, the DB29 bracket can also be used with either bucket selection.

DB52 36ltr Milking Bucket

DB18A 36ltr Dump Bucket
