

Adaptor improvement aids versatility

A new adaptor will be introduced on PP23 100/205ltr and PP25 IBC model Dispensing Pumps. Currently both models have different threads in the PP38 M55 thread and PP26 MBSP thread respectively.

The new adaptor will incorporate both threads MBSP55 and will provide greater versatility for both models of drum pump allowing them to be used on a wider variety of containers.

The new Dual fitting adaptor fits both the metal and plastic 200L drums and IBC's with 58mm outside diameter with a fine thread and 55mm outside diameter with a medium thread.

PP26 – MBSP thread for IBC

NEW combined thread

PP38 – M55 thread for 200ltr

Twice the strength making the Foot Valve Housing much more secure.

Please be aware of a change to the foot valve location on the Ezi Action Drum Pump range (PP22, PP23 and PP25).

This change does **NOT** affect the operation of the pumps. The modification is to allow the foot valve to be more securely attached to the pump body to help prevent operators inadvertently knocking it off while removing the pump from the container.

Previously the foot valve was secured into the body of the pump with 2 holes situated 180° opposite each other, into which the 2 lugs of the foot valve housing were located. On the left in the photos.

The new design shown on the right doubles the number of fixing lugs to 4, situated at 90° to each other.
